

# We support you. So you can support them.

## PREPARATION

No refrigeration or premixing is required with ZOLADEX—the syringe comes ready to administer

## ADMINISTRATION

STEP 1

Clean area you are going to inject with alcohol swab

STEP 2

Remove the syringe from the pouch and hold it at a slight angle to make sure part of the depot is visible. Remove plastic safety tab and needle cover

STEP 3

**Pinch the patient's skin** at the stomach below the belly button, and hold the needle with the bevel facing up at an injection angle of 30°-45°

STEP 4

**Insert the needle**, with the bevel facing up, until the protective sleeve touches the patient's skin

STEP 5

**Depress the plunger** until you hear a "CLICK". The click ensures the SafeSystem has been activated and depot has been deposited in the correct location

STEP 6

**Withdraw the needle** and allow the protective sleeve to slide and cover the needle; dispose in an approved sharps container
